

antecedent basis. With all respect to the Examiner, this rejection is traversed. The Examiner's attention is directed to line 3 of the originally filed claim 1 for a proper antecedent basis. Accordingly, withdrawal of the 35 USC §112, second paragraph rejection of claim 1 is respectfully requested.

The Office action rejects claims 1-5 under 35 USC §102(b) over Hiroki et al. (JP 01186540). With all respect to the Examiner, the 35 USC §102(b) rejections of claims 1-5 are traversed. The Examiner's attention is directed to the attached "Abstract" of Hiroki et al. According to that Abstract, the purpose of Hiroki et al. is: "To remove the unnecessary portion of the magnetic field adversely affecting on the focusing and concentration of a beam by constituting part or all of electrode of an electron gun with a superconducting material." Based on that purpose, and on the fact that Figure 4 of Hiroki et al. does not show element 30 passing through element 4, element 30 is not understood as a slit.

Supporting the understanding that element 30 is not a slit is the description of element 30 provided in Figure 4. That description shows the Japanese character Ka, which means eddy-whirlpool-vortex, followed by the Japanese characters Den and Ryu, which together mean electric current. Reference the Nelson attachment, which provides copies of Japanese characters taken from "Nelson, The Modern Reader's Japanese-English Character Dictionary." Thus, element 30 is understood as eddy current(s).

Therefore, claims 1-5 clearly distinguish over Hiroki et al. in that the cited reference does not teach or suggest a slit as recited in those claims. Accordingly, withdrawal of the 35 USC 102(b) rejections of claims 1-5 is respectfully requested.

The Office action rejects claim 7 under 35 USC §103(a) over Hiroki et al. However, since claim 7 is a dependent claim of allowable base claim 1, claim 7 is patentable over Hiroki et al. Accordingly, withdrawal of the 35 USC §103(a) rejection of claim 7 is respectfully requested.

The Office action rejects claim 7 under 35 USC §103(a) over Kazuaki (JP 61029046). With all respect to the Examiner, that rejection is respectfully traversed. Kazuaki does not teach or suggest orienting slits relative to a magnetic field as recited in claim 1, from

which claim 7 depends. Accordingly, withdrawal of the 35 USC §103(a) rejection of claim 7 is respectfully requested.

In view of the foregoing, the Applicants believe that the subject application is in condition for allowance. Applicants request the Examiner to reconsider and reexamine the subject application. An early, favorable action is respectfully solicited.

If the Examiner deems that a telephone call would further the prosecution of this application, the Examiner is invited to call the Mr. Eric Bram at (914) 333-9635. All correspondence should continue to be sent to the address of record (not to the signing attorney).

If these papers are not considered timely filed by the United States Patent and Trademark Office, or if any additional fees are required, please follow the instructions provided in a paper entitled "Authorization Pursuant to 37 CFR §1.136 (a)(3) and to Charge Deposit Account" that was filed concurrently with the subject application.

Dated: March 3, 2003

"Nelson attachment,
Abstract of Hiroki et al.
Amendment Transmittal Letter

Attachment**Version With Markings to Show Changes Made**

1. (Amended) A color cathode ray tube comprising a display screen, an electron gun for generating three electron beams, said electron beams being directed towards the display screen, and deflection means for generating a magnetic field in a first direction for deflecting the electron beams across the display screen, said electron gun comprising a centering cup having a first part provided with a central aperture and two outer apertures for passing the three electron beams, and a second part extending in the direction of the display screen for avoiding sparks, the centering cup being provided with slits for reducing the effects of eddy currents, [characterized in that] wherein the centering cup comprises a first bridge and a second bridge [creating] that form the slits between the first and second parts, wherein [such that] a first line drawn between a first end of the first bridge and a first end of the second bridge intersects a second line drawn between a second end of the first bridge and a second end of the second bridge, and the bisectrix of the intersecting lines is substantially parallel to the first direction.

2. (Amended) A color cathode ray tube as claimed in claim 1, [characterized in that] wherein the first part comprises a plate provided with the central aperture and the two outer apertures, and wherein the slits [being] are substantially parallel to the plate.

3. (Amended) A color cathode ray tube as claimed in claim 1, [characterized in that] wherein the lengths of the slits are at least 50% of the diameter of the centering cup.

4. (Amended) A color cathode ray tube as claimed in claim 1, [characterized in that] wherein the second part [comprises] forms a circular symmetric jacket.

5. (Amended) A color cathode ray tube as claimed in claim 1, [characterized in that] wherein the first and second parts [comprise] form respective circular symmetric jackets.

7. (Amended) A color cathode ray tube as claimed in claim 1, [characterized in that the] wherein each slit has a width of about 0.1 mm.

ELECTRON GUN

Patent Number: JP1186540
Publication date: 1989-07-26
Inventor(s): SANO HIROKI; others: 02
Applicant(s): HITACHI LTD
Requested Patent: ☐ JP1186540
Application Number: JP19880003727 19880113
Priority Number(s):
IPC Classification: H01J29/50; H01J29/51
EC Classification:
Equivalents:

Abstract

PURPOSE: To remove the unnecessary portion of the magnetic field adversely affecting on the focusing and concentration of a beam by constituting part or all of electrodes of an electron gun with a superconducting material.

CONSTITUTION: A deflecting yoke 6 to deflect an electron beam is installed around a funnel section 8 and forms the deflecting magnetic field 7. A thin film 11 made of a superconducting material is coated or deposited on the inner wall of a neck section so as to surround an electron gun, members 12 made of the superconducting material are fitted to the inner wall of a seal cup 4. These superconducting members 12 are fitted on lines passing nearly the centers between respective beam passing holes in the direction nearly perpendicular to a line connecting a center beam passing hole 15b and side beam passing holes 15a and 15c and the passing direction of the beam. Part of the deflecting magnetic field 7 formed by the deflecting yoke 6 can be prevented from infiltrating into a focusing electrode 3 or an accelerating electrode 4 by the superconducting members 12, and the Lorentz force by the deflecting magnetic field can be prevented from adversely affecting the beam shape during the focusing and acceleration of the beam.

Data supplied from the esp@cenet database - I2
